Merve Esmebasi is a recipient of the Singapore International Graduate Award and she is currently pursuing her Ph.D. at the National University of Singapore. She works as a Teaching and Research Assistant in the Architecture Department. Her research interest centers on exploring how sound is perceived in a built environment. Merve obtained her B.Arch and M.Sc degrees from Middle East Technical University, Turkey. After completing her Master's dissertation in architectural acoustics, she worked for over five years as an acoustics consultant on notable projects in various architectural functions. Additionally, she worked as a part-time instructor of the Acoustics in Architecture lecture at Cankaya University, Turkey. During these years, Merve continued to attend in-person and online conferences held in Portugal, Hong Kong, Turkey, the Republic of Korea, and Singapore to present and follow the current research in the field. She received the Young Professionals Grant from The Institute of Noise Control Engineering for her presentation at the Taming Noise and Moving Quiet conference in Hong Kong. Currently, Merve's doctoral research focuses on audio-visual interaction in cognition, with the aim of creating pleasant architectural spaces that serve the well-being of their occupants.
