Jiongye is a PhD student at Architecture Department. As a researcher with architecture and landscape architecture background, he strives to improve the relationship between human being and existing ecosystem.

Jiongye is especially interested in researching assorted ways in which architecture and landscapes can be applied to develop our society in a sustainable manner. Jiongye's research is mainly focus on carbon neutrality in the built environment and biophilic city.

Though born and raised in China, Jiongye embarked on his career in landscape architecture in Miami, Florida, USA, where he worked as a licensed landscape architect and LEED AP professional in a respected firm. His project experience spans urban plazas, mixed-use urban development, and high-end residential estates.

Since relocating to Singapore, he enjoys spending his free time at swimming pools, tennis courts, exploring exhibits.
