Qi Huiyang is a PhD student in the Department of Architecture. His research primarily focuses on the planning theory of town planning models, and the planning history of Singapore and cities in Northeast China. Huiyang's PhD research is supported by two projects, the Urban Redevelopment Authority (URA)'s project on research and design of the redevelopment of the Paya Lebar Airbase and the Ministry of Education (MOE)'s project on developing future town structural models for a healthy living environment. Huiyang is also a junior ambassador of the International Forum of Urbanism (IFOU).

Previously, Huiyang graduated from Nanyang Technological University with a Bachelor of Civil Engineering, completed a Master of Urban Planning from National University of Singapore, and participated in the Asian Master of Urban Planning Program at the University of Tokyo. He conducted practices at MCC Land (2015-2017) and Country Garden Group (2017-2018), where he gained experience in construction management and land acquisitions.
