Jean You is a PhD researcher at Singapore- ETH center Future Cities Lab. She is part of the Sea-City Interface research team studying how urban development in coastal cities can reduce impacts of climate change. Her research specifically focuses on the intersection between rapidly ageing population in Singapore and Southeast Asia and long-term climate resilience planning.

Her professional experience includes working as an Urban Planning and Resilience Expert at UN-Habitat's Urban Lab, providing technical advice and helping cities incorporate climate risks into spatial planning and design. She was also a Senior Planner at the New York City Department of City Planning and worked on urban policy and projects in land use, zoning, urban design, and architecture related to climate resilience (i.e., flooding).

Jean received her MAUD and MdeS (Risk and Resilience) from Harvard GSD and her B.Arch from Cornell University.
