Reetu is a PhD Researcher at Urban Transitions Lab in the Department of Architecture (NUS) under the guidance of Asst. Prof. Naomi C. Hanakata. Her research focusses on socio-spatial implications of energy transition in India through the lens of planetary urbanisation. She is currently involved as a Research Assistant with her guide on the project, "Singapore's entanglement in the energy transition of Southeast Asia".

With a background in Architecture (Nagpur University, India) and Urban and Regional Planning (CEPT University, India), she effectively integrates the built environment and landscape systems to examine how energy infrastructures reshape vulnerable communities and ecologies. She has more than four years of professional experience in research and physical land use planning, which provides a strong foundation for understanding the intersections of development, displacement, and environmental change. Her research interests include energy transition, socio-spatial transformations, and planetary urbanisation at the fulcrum of urgency and sustainability.
