Jiamin is a PhD candidate in the Department of Architecture, College of Design and Engineering, National University of Singapore. She holds a Master of Science in Landscape Urbanism from the Architectural Association School of Architecture in the United Kingdom and a Bachelor of Agriculture in Landscape Gardening from Beijing Forestry University in China.

Her research interests broadly encompass planetary urbanisation, agrarian landscapes, food provisioning, and centre-periphery relations. Her doctoral research focuses on Singapore's food provisioning, examining how it extends beyond the city-state and contributes to the production of agrarian landscapes across Singapore and Malaysia. Through this lens, she investigates how policies, infrastructures, agricultural practices, and everyday experiences connect urban centres with their extended territories, producing differentiated centre-periphery relations across local and regional scales.
