

# PURPOSE OF VISIT

I am a visiting scholar from Xi'an University of Architecture and Technology, China. When I joined SaRRU in National University of Singapore (NUS), I found them to be a very professional and friendly team. There are regular seminars on the diverse research topic studied in the team. What makes the team very attractive is the team's strong skills in using machine learning and computer vision for construction safety. Recently, we worked together to discuss and analyse the feasibility of a machine learning and computer vision approach to control the risk associate with the hazards of construction dust. The SaRRU team members put forward their opinions and suggestions. In particular, Associate Professor Goh Yang Miang gave me invaluable advice based on his rich professional knowledge and experience.

If anyone has a research problem about construction safety management, SaRRU is definitely a team you can trust.

## Dr. Tian Wei

*Visiting Scholar from Xi'an University of Architecture and Technology, China*

### RESEARCH AREAS

- 
- Construction safety and health management
  - Intelligent construction
  - Risk management
  - Sustainability of old industrial buildings
