

A One-Of-A-Kind Device Empowering Dialysis Patients to Take Control of Their Lives

Problem

- Every Peritoneal Dialysis (PD) patient is likely to experience infection once every year
- Infection (Peritonitis) contributes to the death or removal of catheter in 16% of PD patients
- Currently, no solution for timely detection of infection

Solution

Timely detection of infection (within 24 hr), with real-time and contactless optical sensing

Automatic data logging and sync, for remote patient monitoring

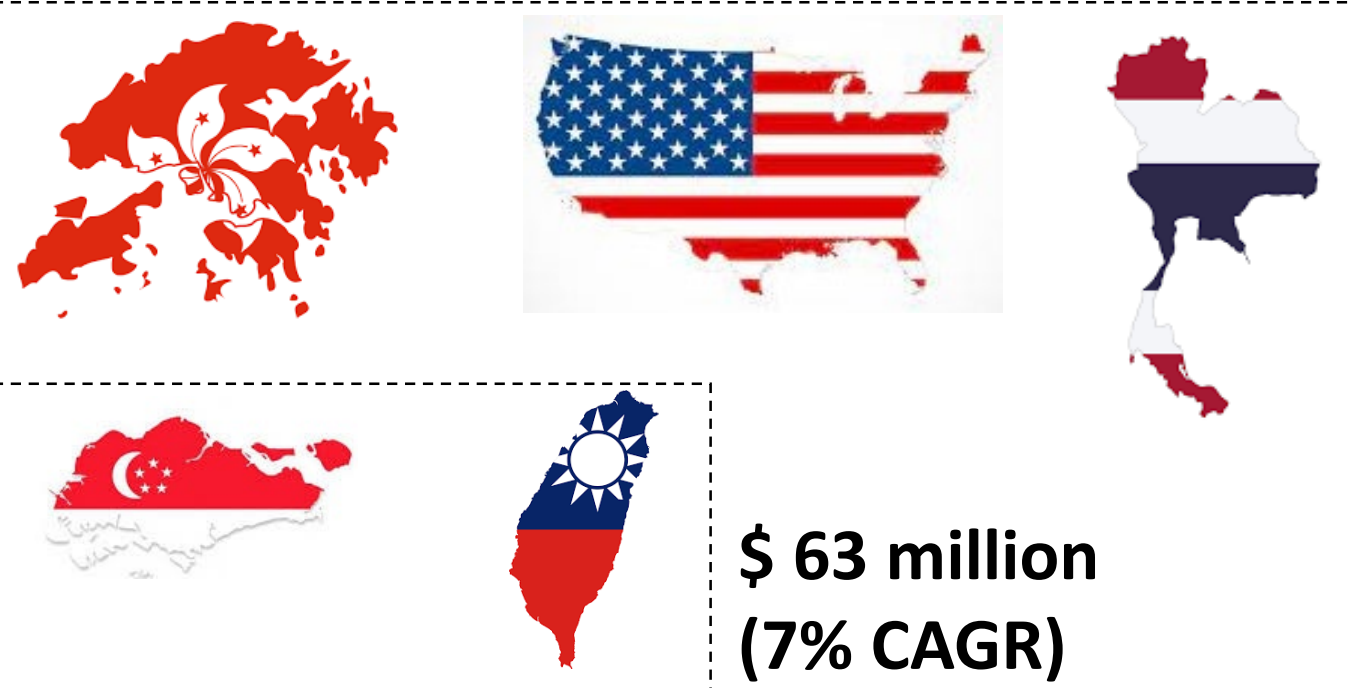

Pump driven system to make the dialysis process faster

Market Size

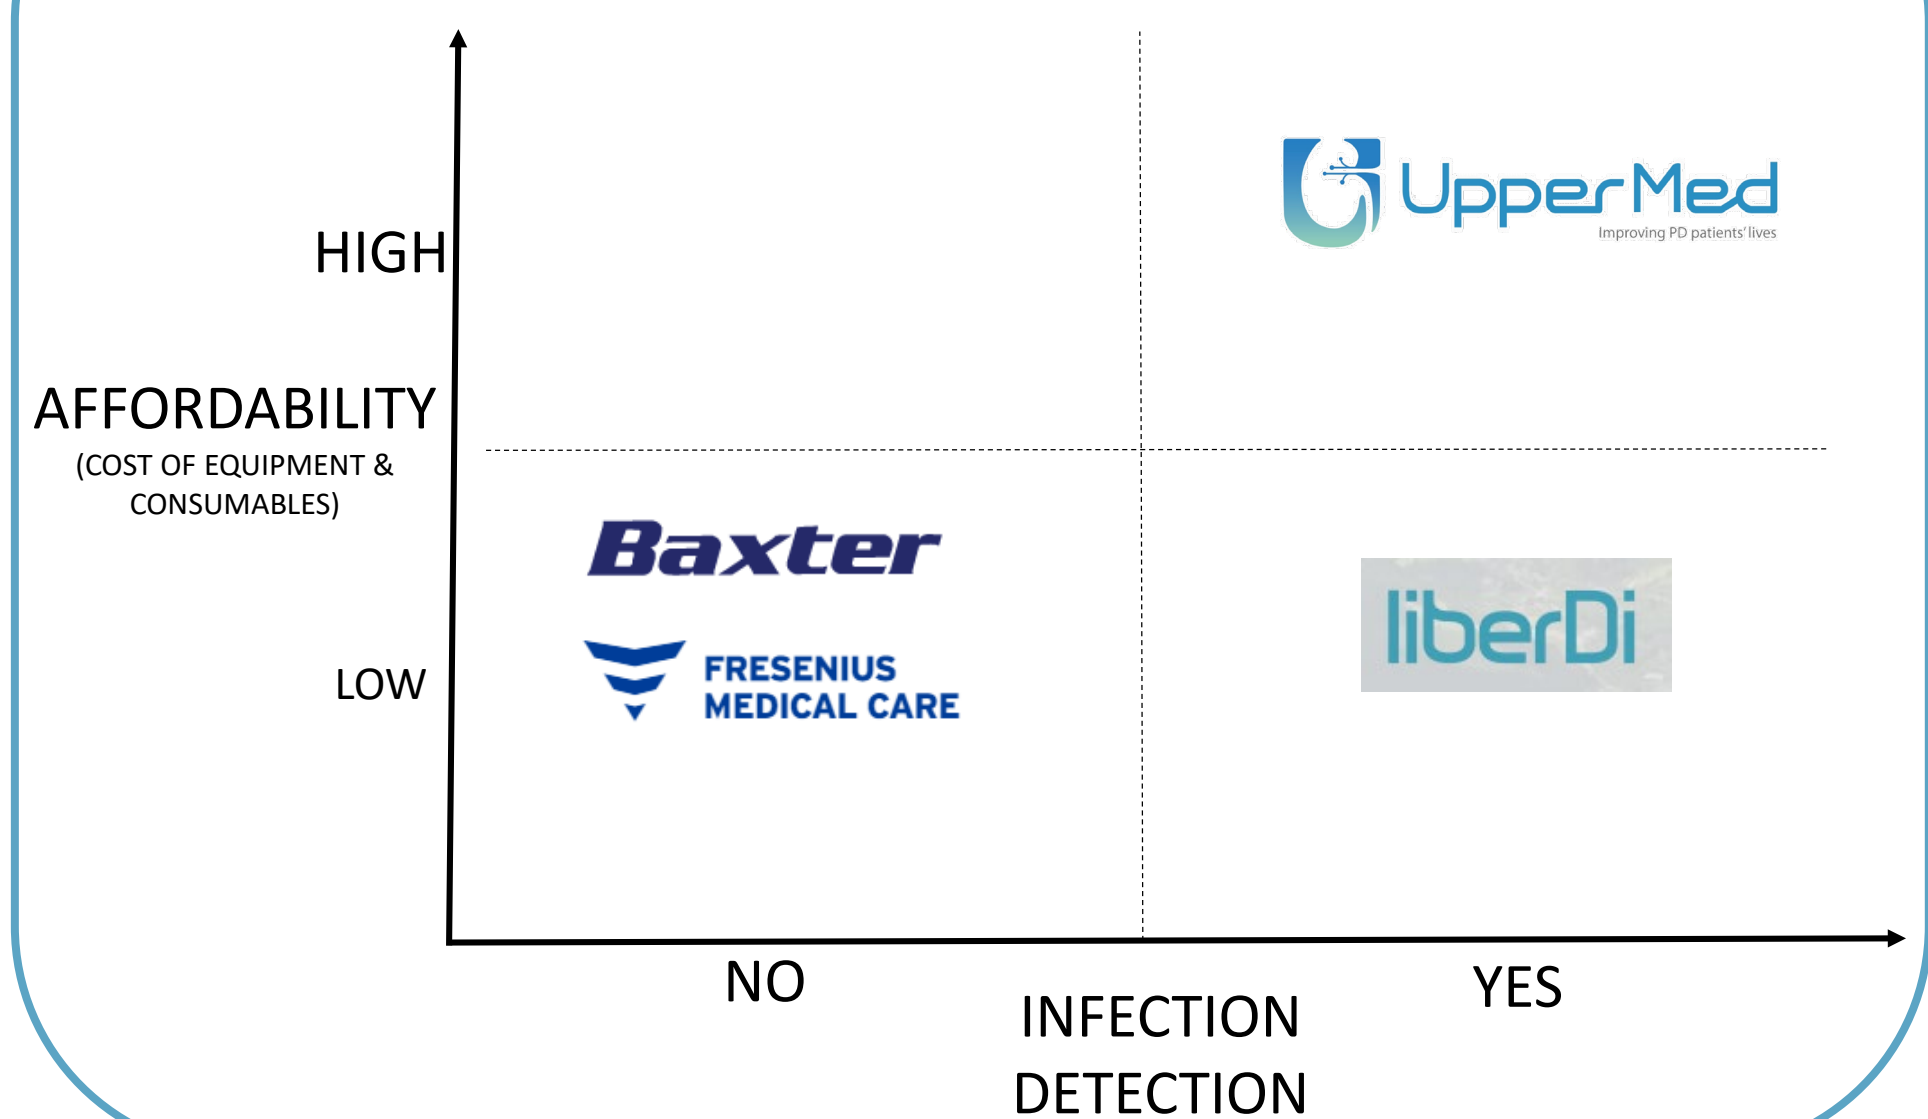

\$ 523 million (7.8% CAGR)

\$ 2.27 billion (7% CAGR)
